NEWS RELEASE

The New Unison Corporation

Contacts: Daniel T. Lenk, Robert Baker

FOR IMMEDIATE RELEASE:

Ferndale, Michigan September 23, 2009 -- We are pleased to announce Unison Corporation has released its new Version 7 Tool and Cutter Software. This software package will allow your operator to run all of your existing Unison part programs and includes a unique "AUTO OPTIMIZE" feature designed specifically for reducing part cycle time without having to modify your existing tool programs. The machine's operator merely depresses "AUTO OPTIMIZE" and the software will automatically analyze your part program to determine the most efficient grind cycle time. This feature will help those companies who do not have the time or in-house talent to be able to modify their existing tool programs to take advantage of Unison's latest software changes. In tests conducted by our Technical Department, there can be a significant reduction in cycle time depending on the part program you are optimizing.

Another benefit of our new Version 7 software is you can use a standard computer to function as a server for advanced networking of your Unison Grinders to easily transfer part and wheel pack programs to your machines. In addition, our software can protect your Unison Grinders from unauthorized use of the equipment and also prevent operators from modifying part programs without permission. The software can be customized to allow machine operators to perform only certain functions and prevent access to restricted areas of the software. Another benefit of this feature is it can prevent machine crashes by inexperienced operators which sometimes result in unnecessary machine repairs and downtime. Our new software also allows your machine operators to quickly customize and/or modify tool geometry as well as provides a real-time, dual feedback diagnostics system for troubleshooting machine errors.

Next time your company has a grinding problem, remember our corporate slogan "**Unison = Grinding Solutions**". Contact us with any questions you may have with respect to this News Release.

Kind Regards,

Unison Corporation
